Chapter 1

Namespace Index

1.1 Package List

Here are the packages with brief descriptions (if available):

age	9
age.clock	9
age.event	10
age.gui	10
age.log	10
age.port	10
age.port.jogl	11
age.scene	11
age.task	11

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

age.clock.Alarm	15
age.event.Button	17
age.scene.Camera	19
age.Client	20
age.clock.Clock	24
age.gui.Dock	26
age.event.Event	28
age.event.Events	33
age.gui.Flag	37
age.scene.Flag	38
GLEventListener	
age.port.jogl.JOGLRenderListener	58
age.port.Graphics	38
age.port.jogl.JOGLGraphics	49
age.event.Handler	42
age.gui.Handling	43
age.event.Key	60
KeyListener	
age.port.jogl.JOGLEventListener	46
age.log.Level	71
age.log.Log	71
MouseListener	
age.port.jogl.JOGLEventListener	46
age.scene.Node	79
age.scene.Part	82
age.port.Port	83
age.port.jogl.JOGLPort	54
age.port.Renderable	86
Renderable	
age.gui.Rendering	87
age.scene.Rendering	89
RuntimeException	
age.AGEEException	13
age.scene.Scene	91
age.clock.Task	92

age.task.Task	93
age.task.Tasks	93
age.event.Type	96
age.Util	97
age.gui.Widget	103
age.gui.Multiline	76
age.gui.VScroller	100
age.gui.Window	111
age.gui.Widgets	110
WindowListener	
age.port.jogl.JOGLEventListener	46

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

age.AGEEException	
Root Exception for AGE	13
age.clock.Alarm	
This package visible class represents a single alarm schedule that periodically triggers a Task after a preset time period	
15	
age.event.Button	17
age.scene.Camera	19
age.Client	
The AGE Application Client main class	20
age.clock.Clock	
The system Clock	24
age.gui.Dock	26
age.event.Event	28
age.event.Events	33
age.gui.Flag	37
age.scene.Flag	38
age.port.Graphics	38
age.event.Handler	42
age.gui.Handling	43
age.port.jogl.JOGLEventListener	46
age.port.jogl.JOGLGraphics	49
age.port.jogl.JOGLPort	54
age.port.jogl.JOGLRenderListener	58
age.event.Key	60
age.log.Level	71
age.log.Log	71
age.gui.Multiline	76
age.scene.Node	79
age.scene.Part	82
age.port.Port	83
age.port.Renderable	86
age.gui.Rendering	87
age.scene.Rendering	89
age.scene.Scene	91

age.clock.Task	
The Task interface that defines the call parameters for a Task reference method	
92	
age.task.Task	93
age.task.Tasks	93
age.event.Type	96
age.Util	
The AGE Utility class	97
age.gui.VScroller	100
age.gui.Widget	103
age.gui.Widgets	110
age.gui.Window	111

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

D:/GIT/repos/ODE/age/age/AGEException.java	115

Chapter 5

Namespace Documentation

5.1 Package age

Packages

- package [clock](#)
- package [event](#)
- package [gui](#)
- package [log](#)
- package [port](#)
- package [scene](#)
- package [task](#)

Classes

- class [AGEException](#)
Root Exception for AGE.
- class [Client](#)
The AGE Application Client main class.
- class [Util](#)
The AGE Utility class.

5.2 Package age.clock

Classes

- class [Alarm](#)
This package visible class represents a single alarm schedule that periodically triggers a Task after a preset time period
- class [Clock](#)
The system Clock.
- interface [Task](#)
The Task interface that defines the call parameters for a Task reference method

5.3 Package age.event

Classes

- enum [Button](#)
- class [Event](#)
- class [Events](#)
- interface [Handler](#)
- enum [Key](#)
- enum [Type](#)

5.4 Package age.gui

Classes

- class [Dock](#)
- enum [Flag](#)
- class [Handling](#)
- class [Multiline](#)
- class [Rendering](#)
- class [VScroller](#)
- class [Widget](#)
- class [Widgets](#)
- class [Window](#)

5.5 Package age.log

Classes

- enum [Level](#)
- class [Log](#)

5.6 Package age.port

Packages

- package [jogl](#)

Classes

- interface [Graphics](#)
- interface [Port](#)
- interface [Renderable](#)

5.7 Package age.port.jogl

Classes

- class [JOGLEventListener](#)
- class [JOGLGraphics](#)
- class [JOGLPort](#)
- class [JOGLRenderListener](#)

5.8 Package age.scene

Classes

- class [Camera](#)
- enum [Flag](#)
- class [Node](#)
- enum [Part](#)
- class [Rendering](#)
- class [Scene](#)

5.9 Package age.task

Classes

- interface [Task](#)
- class [Tasks](#)

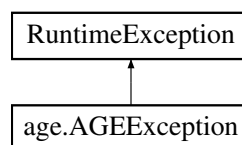

Chapter 6

Class Documentation

6.1 age.AGEEException Class Reference

Root Exception for AGE.

Inheritance diagram for age.AGEEException:

Public Member Functions

- [AGEEException](#) ()
Default Constructor.
- [AGEEException](#) (Throwable cause)
Constructor.
- [AGEEException](#) (String message)
Constructor.
- [AGEEException](#) (String message, Throwable cause)
Constructor.

Static Private Attributes

- static final long [serialVersionUID](#) = 1L
Default serial version number.

6.1.1 Detailed Description

Root Exception for AGE.

The AGEException is derived from Runtime Exception which means that no throws declarations have to be added to surrounding methods.

Exceptions of local try/catch blocks commonly are re-thrown by that Exception in order to make throws statements unnecessary.

6.1.2 Constructor & Destructor Documentation

6.1.2.1 AGEException() [1/4]

```
age.AGEException.AGEException ( )
```

Default Constructor.

6.1.2.2 AGEException() [2/4]

```
age.AGEException.AGEException (
    Throwable cause )
```

Constructor.

Parameters

<i>cause</i>	an Exception typically to be re-thrown.
--------------	---

6.1.2.3 AGEException() [3/4]

```
age.AGEException.AGEException (
    String message )
```

Constructor.

Parameters

<i>message</i>	A text message that is printed on the stack trace in case the Exception is thrown on application level.
----------------	---

6.1.2.4 AGEException() [4/4]

```
age.AGEException.AGEException (
    String message,
    Throwable cause )
```

Constructor.

Parameters

<i>message</i>	A text message that is printed on the stack trace in case the Exception is thrown on application level.
<i>cause</i>	an Exception typically to be re-thrown.

6.1.3 Member Data Documentation

6.1.3.1 serialVersionUID

```
final long age.AGEEException.serialVersionUID = 1L [static], [private]
```

Default serial version number.

6.2 age.clock.Alarm Class Reference

This package visible class represents a single alarm schedule that periodically triggers a Task after a preset time period

Public Member Functions

- void [init](#) (long nanotime)
Initializes the time measurement for this Alarm object.
- void [update](#) (long nanotime)
Updates the time measurement for this Alarm object and periodically triggers the Task after the time period has elapsed.

Package Functions

- [Alarm](#) (long [nanoperiod](#), Task task)
Package visible constructor.

Private Member Functions

- void [trigger](#) (int count, float dT)
Internal method that is called when the time period has elapsed and the task is to be triggered by this method.

Private Attributes

- long [nanoperiod](#)
The time period between triggers in nano seconds.
- Task [task](#)
The task that is triggered periodically after each nanoperiod.
- long [mark](#)
The time mark in nanoseconds to measure when a period elapses

6.2.1 Detailed Description

This package visible class represents a single alarm schedule that periodically triggers a Task after a preset time period

6.2.2 Constructor & Destructor Documentation

6.2.2.1 Alarm()

```
age.clock.Alarm.Alarm (
    long nanoperiod,
    Task task ) [package]
```

Package visible constructor.

Parameters

<i>nanoperiod</i>	the time period in nano seconds after which periodically the task is triggered
<i>task</i>	the task that is triggered periodically each time the nanoperiod time has elapsed

6.2.3 Member Function Documentation

6.2.3.1 init()

```
void age.clock.Alarm.init (
    long nanotime )
```

Initializes the time measurement for this Alarm object.

Parameters

<i>nanotime</i>	the current system time stamp in nano precision
-----------------	---

6.2.3.2 trigger()

```
void age.clock.Alarm.trigger (
    int count,
    float dT ) [private]
```

Internal method that is called when the time period has elapsed and the task is to be triggered by this method.

Parameters

<i>count</i>	the count of full time periods that did elapse since the last time the Task has been triggered. Normally the count is 1.
<i>dT</i>	the time in seconds since the last time the Task has been triggered.

6.2.3.3 update()

```
void age.clock.Alarm.update (
    long nanotime )
```

Updates the time measurement for this Alarm object and periodically triggers the Task after the time period has elapsed.

Parameters

<i>nanotime</i>	the current system time stamp in nano precision
-----------------	---

6.2.4 Member Data Documentation

6.2.4.1 mark

```
long age.clock.Alarm.mark [private]
```

The time mark in nanoseconds to measure when a period elapses

6.2.4.2 nanoperiod

```
long age.clock.Alarm.nanoperiod [private]
```

The time period between triggers in nano seconds.

6.2.4.3 task

```
Task age.clock.Alarm.task [private]
```

The task that is triggered periodically after each nanoperiod.

The documentation for this class was generated from the following file:

- D:/GIT/repos/ODE/age/age/clock/[Alarm.java](#)

6.4 age.scene.Camera Class Reference

Public Member Functions

- [Camera](#) (float [fovy](#), float [near](#), float [far](#))
- void [set](#) (float [fovy](#), float [near](#), float [far](#))

Public Attributes

- float [fovy](#)
- float [near](#)
- float [far](#)

6.4.1 Constructor & Destructor Documentation

6.4.1.1 Camera()

```
age.scene.Camera.Camera (
    float fovy,
    float near,
    float far )
```

6.4.2 Member Function Documentation

6.4.2.1 set()

```
void age.scene.Camera.set (
    float fovy,
    float near,
    float far )
```

6.4.3 Member Data Documentation

6.4.3.1 far

```
float age.scene.Camera.far
```

6.4.3.2 fovy

```
float age.scene.Camera.fovy
```

6.4.3.3 near

```
float age.scene.Camera.near
```

The documentation for this class was generated from the following file:

6.5 age.Client Class Reference

The AGE Application Client main class.

Public Member Functions

- void `run` ()
Initializes and executes the Client run loop.
- void `shutdown` ()
Sets the internal Client loop run state to false, and therefore stops the client run loop.

Static Public Member Functions

- static void `main` (String[] args)
The static Client main method to create a client instance and launch the application.

Private Member Functions

- void `setup` ()
Initializes the Client application and its parts.
- void `setupScene` ()
Sets up the initial 3D Scene.
- void `setupGUI` ()
Sets up the initial GUI elements.
- void `toggleSysmenu` ()
Private action method to toggle the visibility of the System Menu.
- void `toggleDesktop` ()
Private action method to toggle the visibility of the Desktop and its contents.
- void `loop` ()
The Client loop that maintains the program logic.
- void `render` (int count, long nanoperiod, float dT)
Private scheduler action to update the display contents and render the Client surface.
- void `update` (int count, long nanoperiod, float dT)
Private scheduler action to update the logic of the Client application.

Private Attributes

- Clock `clock` = new Clock()
The schedule clock.
- Events `events` = new Events()
The event system, handling and transforming input events.
- Scene `scene` = new Scene()
The 3D scene system.
- Widgets `widgets` = new Widgets()
The widget system (the GUI)
- Tasks `tasks` = new Tasks()
The task system.
- Port `port` = new JOGLPort()
The port system.
- boolean `running` = false
The run loop running indicator.
- Widget `sysMenuFrame`
Special internally used GUI Frame (The single System menu Button)
- Widget `windowFrame`
Special internally used GUI Frame (The invisible frame that serves as canvas for all GUI windows)

6.5.1 Detailed Description

The AGE Application Client main class.

6.5.2 Member Function Documentation

6.5.2.1 loop()

```
void age.Client.loop ( ) [private]
```

The Client loop that maintains the program logic.

6.5.2.2 main()

```
static void age.Client.main (
    String[] args ) [static]
```

The static Client main method to create a client instance and launch the application.

Parameters

<i>args</i>	Program arguments, unused atm.
-------------	--------------------------------

6.5.2.3 render()

```
void age.Client.render (
    int count,
    long nanoperiod,
    float dT ) [private]
```

Private scheduler action to update the display contents and render the Client surface.

Parameters

<i>count</i>	The number of (skipped) schedule frames since last call
<i>nanoperiod</i>	The duration of a schedule frame in nano seconds
<i>dT</i>	The time elapsed since last schedule call, in Seconds.

6.5.2.4 run()

```
void age.Client.run ( )
```

Initializes and executes the Client run loop.

6.5.2.5 setup()

```
void age.Client.setup ( ) [private]
```

Initializes the Client application and its parts.

6.5.2.6 setupGUI()

```
void age.Client.setupGUI ( ) [private]
```

Sets up the initial GUI elements.

6.5.2.7 setupScene()

```
void age.Client.setupScene ( ) [private]
```

Sets up the initial 3D Scene.

6.5.2.8 shutdown()

```
void age.Client.shutdown ( )
```

Sets the internal Client loop run state to false, and therefore stops the client run loop.

6.5.2.9 toggleDesktop()

```
void age.Client.toggleDesktop ( ) [private]
```

Private action method to toggle the visibility of the Desktop and its contents.

6.5.2.10 toggleSystemenu()

```
void age.Client.toggleSystemenu ( ) [private]
```

Private action method to toggle the visibility of the System Menu.

6.5.2.11 update()

```
void age.Client.update (
    int count,
    long nanoperiod,
    float dT ) [private]
```

Private scheduler action to update the logic of the Client application.

Parameters

<i>count</i>	The number of (skipped) schedule frames since last call
<i>nanoperiod</i>	The duration of a schedule frame in nano seconds
<i>dT</i>	The time elapsed since last schedule call, in Seconds.

6.5.3 Member Data Documentation

6.5.3.1 clock

```
Clock age.Client.clock = new Clock() [private]
```

The schedule clock.

6.5.3.2 events

```
Events age.Client.events = new Events() [private]
```

The event system, handling and transforming input events.

6.5.3.3 port

```
Port age.Client.port = new JOGLPort() [private]
```

The port system.

Provides and encapsulates the low level machine dependent parts of the Client application.

6.5.3.4 running

```
boolean age.Client.running = false [private]
```

The run loop running indicator.

6.5.3.5 scene

```
Scene age.Client.scene = new Scene() [private]
```

The 3D scene system.

6.5.3.6 sysMenuFrame

```
Widget age.Client.sysMenuFrame [private]
```

Special internally used GUI Frame (The single System menu Button)

6.5.3.7 tasks

```
Tasks age.Client.tasks = new Tasks() [private]
```

The task system.

Launches named tasks, that can be posted and queued, on a specific run loop phase.

6.5.3.8 widgets

```
Widgets age.Client.widgets = new Widgets() [private]
```

The widget system (the GUI)

6.5.3.9 windowFrame

```
Widget age.Client.windowFrame [private]
```

Special internally used GUI Frame (The invisible frame that serves as canvas for all GUI windows)

The documentation for this class was generated from the following file:

- D:/GIT/repos/ODE/age/age/[Client.java](#)

6.6 age.clock.Clock Class Reference

The system Clock.

Public Member Functions

- void [add](#) (long nanoperiod, [Task](#) task)
Method to add a Task to be periodically triggered after a given time period has elapsed.
- void [addFPS](#) (int fps, [Task](#) task)
Method to add a Task to be periodically triggered after a given time period has elapsed.
- void [init](#) ()
Initializes time measurement for all Alarm objects added to the Clock.
- void [update](#) ()
update time measurement for all Alarm objects added to the Clock, and indirectly triggers and executes Tasks when their Alarm period has elapsed.

Private Attributes

- final List< [Alarm](#) > [alarms](#) = new ArrayList<>()
The internal list to manage Alarm objects.

6.6.1 Detailed Description

The system Clock.

Normally only one instance of that clock is created per application. It manages and synchronizes multiple Alarm objects that each are responsible to manage the time periodic triggering of a specific Task

6.6.2 Member Function Documentation

6.6.2.1 add()

```
void age.clock.Clock.add (
    long nanoperiod,
    Task task )
```

Method to add a Task to be periodically triggered after a given time period has elapsed.

Parameters

<i>nanoperiod</i>	the time period in nano seconds after which the Task is triggered.
<i>task</i>	the Task to be triggered and executed.

6.6.2.2 addFPS()

```
void age.clock.Clock.addFPS (
    int fps,
    Task task )
```

Method to add a Task to be periodically triggered after a given time period has elapsed.

Parameters

<i>fps</i>	the trigger frames per second (i. e. how often the Task is triggered per second)
<i>task</i>	the Task to be triggered and executed.

6.6.2.3 init()

```
void age.clock.Clock.init ( )
```

Initializes time measurement for all Alarm objects added to the Clock.

6.6.2.4 update()

```
void age.clock.Clock.update ( )
```

update time measurement for all Alarm objects added to the Clock, and indirectly triggers and executes Tasks when their Alarm period has elapsed.

6.6.3 Member Data Documentation

6.6.3.1 alarms

```
final List<Alarm> age.clock.Clock.alarms = new ArrayList<>() [private]
```

The internal list to manage Alarm objects.

The documentation for this class was generated from the following file:

- [D:/GIT/repos/ODE/age/age/clock/Clock.java](#)

6.7 age.gui.Dock Class Reference

Public Member Functions

- float [top](#) ()
- float [bottom](#) ()
- float [left](#) ()
- float [right](#) ()
- void [set](#) ([Dock](#) dock)
- void [set](#) (float [left](#), float [right](#), float [top](#), float [bottom](#))

Private Attributes

- float [left](#) = 0
- float [right](#) = 0
- float [top](#) = 0
- float [bottom](#) = 0

6.7.1 Member Function Documentation

6.7.1.1 bottom()

```
float age.gui.Dock.bottom ( )
```

6.7.1.2 left()

```
float age.gui.Dock.left ( )
```

6.7.1.3 right()

```
float age.gui.Dock.right ( )
```

6.7.1.4 set() [1/2]

```
void age.gui.Dock.set (
    Dock dock )
```

6.7.1.5 set() [2/2]

```
void age.gui.Dock.set (
    float left,
    float right,
    float top,
    float bottom )
```

6.7.1.6 top()

```
float age.gui.Dock.top ( )
```

6.7.2 Member Data Documentation

6.7.2.1 bottom

```
float age.gui.Dock.bottom = 0 [private]
```

6.7.2.2 left

```
float age.gui.Dock.left = 0 [private]
```

6.7.2.3 right

```
float age.gui.Dock.right = 0 [private]
```

6.7.2.4 top

```
float age.gui.Dock.top = 0 [private]
```

6.12.1 Member Function Documentation

6.12.1.1 [applyTransformation\(\)](#)

```
void age.port.Graphics.applyTransformation (
    Matrix4f matrix )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.2 [calcMultitext\(\)](#) [1/2]

```
void age.port.Graphics.calcMultitext (
    String text,
    float width,
    float height,
    String font,
    int[] buffer )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.3 [calcMultitext\(\)](#) [2/2]

```
void age.port.Graphics.calcMultitext (
    String text,
    Vector2f dimension,
    String font,
    int[] buffer )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.4 color() [1/3]

```
void age.port.Graphics.color (
    Color4f c )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.5 color() [2/3]

```
void age.port.Graphics.color (
    float r,
    float g,
    float b )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.6 color() [3/3]

```
void age.port.Graphics.color (
    float r,
    float g,
    float b,
    float a )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.7 drawBox()

```
void age.port.Graphics.drawBox (
    float sx,
    float sy,
    float sz )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.8 mode2D()

```
void age.port.Graphics.mode2D ( )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.9 mode3D()

```
void age.port.Graphics.mode3D (
    float fovy,
    float near,
    float far )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.10 popTransformation()

```
void age.port.Graphics.popTransformation ( )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.11 pushTransformation()

```
void age.port.Graphics.pushTransformation ( )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.12 rectangle() [1/3]

```
void age.port.Graphics.rectangle (
    float x,
    float y,
    float w,
    float h,
    boolean hollow )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.13 rectangle() [2/3]

```
void age.port.Graphics.rectangle (
    Vector2f dim,
    boolean hollow )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.14 rectangle() [3/3]

```
void age.port.Graphics.rectangle (
    Vector2f pos,
    Vector2f dim,
    boolean hollow )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.15 text()

```
void age.port.Graphics.text (
    float x,
    float y,
    CharSequence text,
    String font )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.16 texture()

```
void age.port.Graphics.texture (
    float x,
    float y,
    float w,
    float h,
    String texture )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.17 translate() [1/2]

```
void age.port.Graphics.translate (
    float x,
    float y )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.12.1.18 translate() [2/2]

```
void age.port.Graphics.translate (
    Vector2f pos )
```

Implemented in [age.port.jogl.JOGLGraphics](#).

6.30 age.clock.Task Interface Reference

The Task interface that defines the call parameters for a Task reference method

Public Member Functions

- void [run](#) (int count, long nanoperiod, float dT)
The definition of the Task reference method.

6.30.1 Detailed Description

The Task interface that defines the call parameters for a Task reference method

6.30.2 Member Function Documentation

6.30.2.1 run()

```
void age.clock.Task.run (
    int count,
    long nanoperiod,
    float dT )
```

The definition of the Task reference method.

Parameters

<i>count</i>	number of full nanoperiods that have elapsed since last call. Normally 1
<i>nanoperiod</i>	the time period in nano seconds after which the Task normally is triggered
<i>dT</i>	the time in seconds that did elapse since last call.

6.34 age.Util Class Reference

The AGE Utility class.

Static Public Member Functions

- static final String [readTextFile](#) (String path)
Static utility method to load and return text read from a file located by path.
- static final< C > C [readJsonFile](#) (String path, Class< C > cls)
Utility method to read JSON files.
- static float[] [toGLMatrix](#) (Matrix4f m, float[] buffer)
Utility method to transform a vecmath matrix into an Open GL matrix array.
- static Matrix4f [fromGLMatrix](#) (Matrix4f m, float[] buffer)
Utility method to transform an Open GL matrix array into a vecmath matrix.
- static Matrix4f [camReverse](#) (Matrix4f src, Matrix4f dst)
Utility method to convert a world transformation matrix into an inverted camera centric matrix.

Static Private Attributes

- static final ObjectMapper [objectMapper](#) = new ObjectMapper()
Internally used JSON mapper.

6.34.1 Detailed Description

The AGE Utility class.

6.34.2 Member Function Documentation

6.34.2.1 [camReverse\(\)](#)

```
static Matrix4f age.Util.camReverse (
    Matrix4f src,
    Matrix4f dst ) [static]
```

Utility method to convert a world transformation matrix into an inverted camera centric matrix.

Parameters

<i>src</i>	the world transformation matrix of the camera
<i>dst</i>	the inverted transformation matrix to transform world transformations into camera relative transformations

Returns

the filled in transformation matrix

6.34.2.2 [fromGLMatrix\(\)](#)

```
static Matrix4f age.Util.fromGLMatrix (
    Matrix4f m,
    float[] buffer ) [static]
```

Utility method to transform an Open GL matrix array into a vecmath matrix.

Parameters

<i>m</i>	the target vecmath matrix
<i>buffer</i>	the source Open GL matrix array

Returns

the filled target vecmath matrix

6.34.2.3 readJsonFile()

```
static final< C > C age.Util.readJsonFile (
    String path,
    Class< C > cls ) [static]
```

Utility method to read JSON files.

Parameters

<i>path</i>	The file path of the JSON file
<i>cls</i>	the Class type the JSON file will be transformed to

Returns

the typed object the JSON file is transformed to

6.34.2.4 readTextFile()

```
static final String age.Util.readTextFile (
    String path ) [static]
```

Static utility method to load and return text read from a file located by path.

Parameters

<i>path</i>	The file path String of the file to be read
-------------	---

Returns

The file contents as a text String

6.34.2.5 toGLMatrix()

```
static float[] age.Util.toGLMatrix (
    Matrix4f m,
    float[] buffer ) [static]
```

Utility method to transform a vecmath matrix into an Open GL matrix array.

Parameters

<i>m</i>	the vecmath source matrix
<i>buffer</i>	the Open GL matrix target buffer

Returns

the filled Open GL matrix target buffer

6.34.3 Member Data Documentation

6.34.3.1 objectMapper

```
final ObjectMapper age.Util.objectMapper = new ObjectMapper() [static], [private]
```

Internally used JSON mapper.

6.35.2 Member Function Documentation

6.35.2.1 assign()

```
void age.gui.VScroller.assign (
    Tasks tasks,
    Task taskUp,
    Task taskDn )
```

6.35.2.2 create()

```
void age.gui.VScroller.create ( ) [private]
```

6.35.2.3 handle()

```
Widget age.gui.VScroller.handle ( )
```

6.35.2.4 set()

```
void age.gui.VScroller.set (
    int size,
    int page,
    int mark )
```

6.35.2.5 value()

```
void age.gui.VScroller.value (
    int mark )
```

6.35.3 Member Data Documentation

6.35.3.1 bar

```
Widget age.gui.VScroller.bar [private]
```

6.35.3.2 btnDn

```
Widget age.gui.VScroller.btnDn [private]
```

6.35.3.3 btnUp

```
Widget age.gui.VScroller.btnUp [private]
```

6.35.3.4 handle

```
Widget age.gui.VScroller.handle [private]
```

6.35.3.5 mark

```
int age.gui.VScroller.mark [private]
```

6.35.3.6 page

```
int age.gui.VScroller.page [private]
```

6.35.3.7 size

```
int age.gui.VScroller.size [private]
```

6.35.3.8 uuid

```
UUID age.gui.VScroller.uuid = UUID.randomUUID() [private]
```

    Flag ... flags )
```

6.36.2.16 flags()

```
Set< Flag > age.gui.Widget.flags ( )
```

6.36.2.17 height()

```
float age.gui.Widget.height ( )
```

6.36.2.18 image() [1/2]

```
String age.gui.Widget.image ( )
```

6.36.2.19 image() [2/2]

```
void age.gui.Widget.image (
    String image )
```

6.36.2.20 match()

```
boolean age.gui.Widget.match (
    Flag ... flags )
```

6.36.2.21 parent()

```
Widget age.gui.Widget.parent ( )
```

6.36.2.22 parentResized()

```
void age.gui.Widget.parentResized (
    float dx,
    float dy ) [private]
```

6.36.2.23 position() [1/3]

```
Vector2f age.gui.Widget.position ( )
```

6.36.2.24 position() [2/3]

```
void age.gui.Widget.position (
    float x,
    float y )
```

6.36.2.25 position() [3/3]

```
void age.gui.Widget.position (
    Vector2f position )
```

6.36.2.26 positionAdd() [1/2]

```
void age.gui.Widget.positionAdd (
    float x,
    float y )
```

6.36.2.27 positionAdd() [2/2]

```
void age.gui.Widget.positionAdd (
    Vector2f position )
```

6.36.2.28 remove()

```
void age.gui.Widget.remove ( )
```

6.36.2.29 resized()

```
void age.gui.Widget.resized (
    float dx,
    float dy ) [private]
```

File Documentation

7.1 D:/GIT/repos/ODE/age/age/AGEException.java File Reference

Classes

- class [age.AGEException](#)
Root Exception for AGE.

Packages

- package [age](#)

7.2 D:/GIT/repos/ODE/age/age/Client.java File Reference

```
import age.port.Port;
```

Classes

- class [age.Client](#)
The AGE Application Client main class.

Packages

- package [age](#)

7.3 D:/GIT/repos/ODE/age/age/clock/Alarm.java File Reference

Classes

- class [age.clock.Alarm](#)
This package visible class represents a single alarm schedule that periodically triggers a Task after a preset time period

Packages

- package [age.clock](#)

7.4 D:/GIT/repos/ODE/age/age/clock/Clock.java File Reference

```
import java.util.ArrayList;
```

Classes

- class [age.clock.Clock](#)
The system Clock.

Packages

- package [age.clock](#)

7.5 D:/GIT/repos/ODE/age/age/clock/Task.java File Reference

Classes

- interface [age.clock.Task](#)
The Task interface that defines the call parameters for a Task reference method
